

ABOUT CYXTERA

# Secure Infrastructure for the Modern Enterprise

## ABOUT CYXTERA

Technology has never moved faster. We've reimaged infrastructure. We've redefined the way we build and run applications. Now it's time to reinvent the way we secure our business systems and networks. It's time to make security as agile, scalable and resilient as today's infrastructure and applications.

### The secure infrastructure company

The last two decades have seen seismic changes in the availability, agility and scalability of enterprise IT. The next era in technology must be underpinned by a revolution in infrastructure security. That's why we built Cyxtera—a secure infrastructure platform for today's agile, distributed IT.

Cyxtera brings together a global data center footprint and a modern, hybrid- and cloud-ready security portfolio. The result is a powerful, resilient platform capable of securing and supporting dedicated infrastructure, private and public clouds—and with software and services that extend protection to on-premises environments and public clouds.

### A platform for the next era

Today's IT estates run in more locations, on more platforms, and with more diverse models than ever before. Enterprise IT is dynamic, distributed and deeply interconnected. And our systems operate in real-time, with software-defined agility and global scale.

But the ways in which we secure infrastructure and networks haven't changed. They remain hardware-centric and inflexible in an API-driven universe. They're perimeter-focused in a world without boundaries. It's the same cumbersome, expensive, static hardware trying in vain to secure a world in constant motion.

By combining a modern, hybrid-ready information security fabric with an uncommonly diverse and distributed footprint of 57 world-class data centers, Cyxtera delivers a secure platform for connecting and protecting dedicated infrastructure, private clouds and public clouds.

Simply put, Cyxtera is a new kind of data center company—one that operates at the nexus of enterprise IT and the cloud, with security integrated as a core service offering. And we're a new kind of security company—with solutions built for the way we run our applications today.

### Cybersecurity built for today's IT

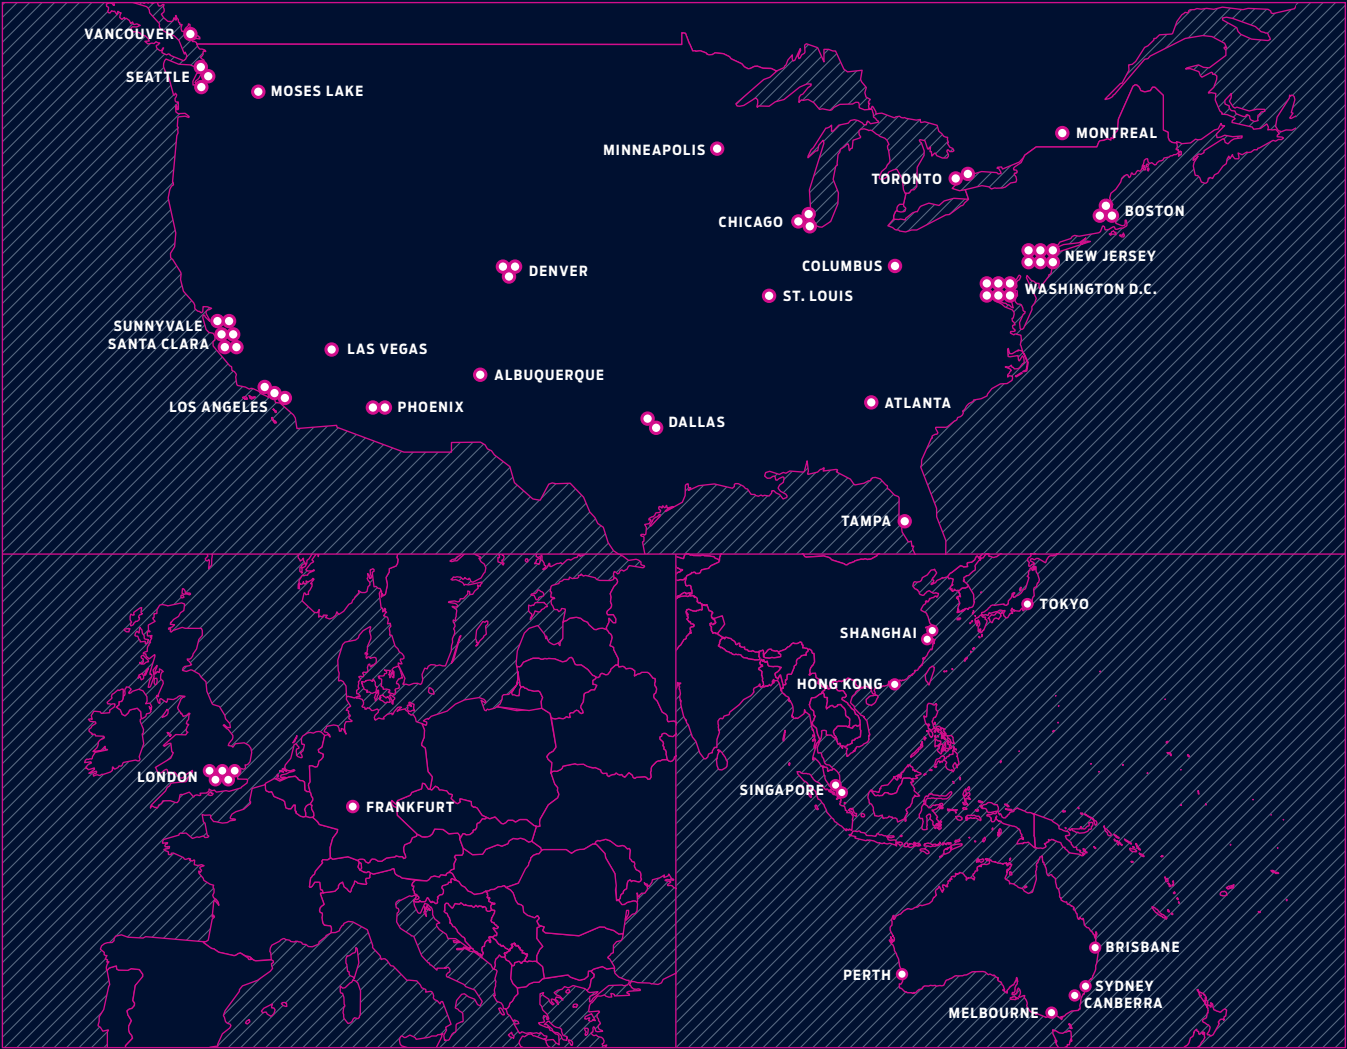

- Hybrid ready, cloud native and cloud agnostic
- Software-defined perimeter solutions for dynamic and adaptive network access
- Specialized fraud prevention and authentication services for specific verticals, including financial institutions and government agencies
- Advanced investigative and network analytics to help better detect, prevent and predict threats

### A global leader in colocation

- 57 world-class data centers in 25+ global markets
- 50+ Data centers with Uptime Institute M&O Stamp of Approval
- 2.6 million sq. ft. of data center space
- 195 Megawatts of power
- 100% Availability SLAs
- 600+ Certified engineers and operations personnel

# A secure platform for modern IT

- Global data center footprint with integrated security capabilities
- Unified network security and deep analytics across hybrid architectures
- On-premises security and analytics capabilities via Software and as-a-Service delivery
- Specialty services for key verticals

Cyxtera Technologies combines a global footprint of best-in-class data centers with a portfolio of modern, cloud- and hybrid-ready security and analytics offerings—providing more than 3,500 customers worldwide with an integrated, secure and resilient infrastructure platform for critical applications and systems.
