

# SAFESTOR ENTERPRISE

Powered by **COMMVAULT** 

## A complete data management and disaster recovery platform

Vulnerable data puts your business at risk. Keeping it safe requires a solution for data management and disaster recovery – one that rolls industry leading software, on-premises and cloud infrastructures, and expert platform management into a simple operating expense.

SafeStor Enterprise, powered by Commvault technology and managed by UbiStor, is a holistic offering, delivering the most architecturally and financially flexible service available for backing up, protecting and recovering your applications, systems, and data anywhere they live. This includes:

### A Disaster Recovery Roadmap

Seize the opportunity to move beyond tape-based backups and toward a more efficient, streamlined solution that simplifies recovery across multiple environments to meet your RTOs and RPOs.

### Application-centric Continuity

Leverage scalable cloud resources, image-level backups and near real-time replication, for a DR and business continuity strategy that is optimized for your specific applications across their entire data lifecycle.

### Flexible Offsite Options

Connect to public, private or hybrid clouds for offsite management. No matter what IT infrastructure mix you rely on, we ensure a single scalable solution for recovering all of your platforms, regardless of their locations.

### Fast, Local Recovery

Tap into on-premise infrastructure to quickly and reliably recover applications, systems and other assets within your own data center in minutes – not hours or a day – and avoid costly downtime that could damage your business.

### UbiStor Managed Services

Entrust the day-to-day oversight and upkeep of your DR environments to an experienced provider who knows what they are doing when it comes to proactive monitoring, patch management and more.

SafeStor Enterprise, powered by Commvault technology and managed by UbiStor, is a holistic offering, delivering the most architecturally and financially flexible service available for backing up, protecting, and recovering your applications, systems, and data, anywhere they live.

Whether you are rolling back to recover from a ransomware attack or seeking a way forward after a flood, UbiStor provides the peace of mind that your environments are consistently recoverable. It's an end-to-end solution extending to your on-premise and cloud servers, endpoints, VMs, databases, and applications. SafeStor Enterprise delivers this result with:

### Flexible Backup and Recovery

Backup and DR is not a core function of the typical business, making it challenging to manage the growing complexity of having data both on-premise and in multiple clouds. The Commvault software at the heart of SafeStor Enterprise provides the precise control, flexibility and automation for efficiently managing company information across these dynamic environments.

From a single pane of glass, it's possible to perform backup, recovery, content indexing, eDiscovery and other functions as you migrate and manage data across the enterprise. It is the most convenient way to protect the pillars of your business and also maintain compliance with applicable rules and regulations such as HIPAA and PCI.

### One Solution For All Applications and Systems

Enterprise applications are the backbone of modern business. ERP systems, human capital management software and business email fuel everyone's productivity, making dependable uptime and recovery paramount.

Safestor Enterprise powered by Commvault technology integrates these applications into your backup and recovery processes, improving recovery times and reducing storage requirements associated with archiving their data.

### 24/7 Service and Support

Our support team of experts is available 24/7. We will monitor your daily job logs and storage infrastructure, handle patch management of all associated software and operating systems, review capacity optimization of the backup environment, and perform monthly data management reviews with your team to ensure everything is running optimally.

### Financial and Architectural Flexibility

Data management requires the software, hardware, offsite replications, implementation and ongoing maintenance to work effectively. SafeStor Enterprise combines these components of a policy-driven, variable consumption OPEX model that saves you the complexity and expense of an in-house CAPEX setup.

Customers can scale resources on demand to meet changing requirements, while freeing up internal IT teams to work on more strategic initiatives and align recovery with the business's expectations.

#### About UbiStor

UbiStor is a Managed Service Provider that has been in business since 2001, specializing in data protection and recovery. We deliver a portfolio of custom managed IT services for backup, DR, and IaaS. Our commitment to performance, compliance, and security is reflected in the reliable and cost-effective solutions we have delivered to customers for nearly 20 years.

UbiStor provides the technologies and support you need to make it through a disaster. Learn more by contacting our partner, Sommita, at [info@sommita.net](mailto:info@sommita.net).
