

# SAFESTOR RECOVERY

Powered by **datto**

## Comprehensive Backup and DRaaS with Built-in Data Protection

Data is the fuel that runs businesses. Protecting and being able to restore it quickly is essential to business continuity. When disaster strikes, you need your critical systems back online in minutes, not hours or days.

SafeStor Recovery's secure image-based backups are easy to schedule and always ready for immediate restoration, allowing you to feel a sense of security and the ability to focus on other areas of the business. In just a few clicks, you can boot VMs containing fully constructed images of your environment, without any of the guesswork, command line wrangling, or extensive manual interventions of the past.

### Secure Backup

Simply schedule regular backups, as often as every five minutes, to ensure that your data is always safely stored to an on-site appliance or our network of data centers.

### Quick Recovery

Protected systems can be virtualized in seconds on the on-site appliance or in our secure cloud to get you backup up and running right away.

### Business Continuity

Image-based backups can be instantly virtualized within the on-site appliance or our secure cloud with a single click.

### Immediate Ransomware Detection

Detecting ransomware infections right away and ensuring you can safely execute point-in-time rollbacks.

### Automatic Screenshot Verifications

Continually check image integrity through automatic screenshot verifications performed immediately after backup completion.

*The key to business continuity is getting up and running instantly after disaster. Your protected systems can be immediately virtualized either locally or in the cloud and then recovered with just a few clicks.*

### Full Backup and Restoration in One Platform

Natural disaster is what frequently comes to mind when it comes to disaster recovery, but protecting against system failure, human error, and cyberattacks are of equal importance

SafeStor Recovery helps you navigate these scenarios with its flexible hybrid virtualization – all in one easy-to-use platform. You can virtualize and recover a system locally or in the cloud, ensuring your data is safe and accessible on-demand no matter where it lives.

The tools within the Datto platform allow you to tailor the solution to fit your business. The deep visibility provided by Datto Backup Insights – along with environment-specific features such as agentless snapshot backups for VMware and diskless restore for failed HDDs – lets you configure and fine-tune a regular backup schedule.

### Instant System DR

The key to business continuity is getting up and running instantly after disaster. Your protected systems can be immediately virtualized either locally or in the cloud and then recovered with just a few clicks. Instead of waiting for replacement hardware, reconstructing backups on disk, or trying to recover with tape, you can tap into local and/or cloud resources to rapidly reboot your business. Since backups are fully bootable virtual machines, there is no need for complex, time-consuming conversion processes before performing a restore.

### Backup Management and Verification

SafeStor Recovery gives you ultimate security that your data is safe and recoverable by giving you side-by-side comparisons of backups in a tree interface and script-driven advanced screenshot verification, allowing you to see if a database is corrupted or a particular service is included. Built-in eDiscovery software also makes it easy to find keywords in backups so you can select the right image every time. AES-256 encryption protects all backup data at rest and in transit, while each appliance may also be secured with a passphrase.

### Advanced Ransomware Mitigation

Ransomware has become one of the most prominent cybersecurity threats. It's uniquely difficult to address because once an infection is identified, your data is likely already encrypted and subject to a ransom that, even if paid, might not guarantee safe return.

The only recourse is point-in-time rollbacks. With SafeStor Recovery, unique multi-stage detection finds lurking ransomware and sends alerts. With Datto's Instant Virtualization, images can be booted in as little as 6 seconds.

### Support when you need it

Our 24/7 Support Center and integrated managed services give you piece-of-mind that your key applications and data will be available, particularly when you need to get things back up and running quickly. Our highly trained engineers and their vast wealth of disaster recovery experience will ensure your backups are configured correctly and your systems are replicated to our disaster recovery facilities.

### About UbiStor

UbiStor is a Managed Service Provider that has been in business since 2001, specializing in data protection and recovery. We deliver a portfolio of custom managed IT services for backup, DR, and IaaS. Our commitment to performance, compliance, and security is reflected in the reliable and cost-effective solutions we have delivered to customers for nearly 20 years.

UbiStor provides the technologies and support you need to make it through a disaster. Learn more by contacting UbiStor partner Sommita at [info@sommita.net](mailto:info@sommita.net).
